A WORD FROM A GRADUATE

"Employers want employees with both education and experience. I was very fortunate because Mercer helped me to get both," said James Prolizo, a 2005 graduate. "That combination drastically improved my job prospects." An engineer at Envisionware Inc., Prolizo finds that not only are his education and working experience important, but so are his "soft-skills," such as leadership, communication and presentation skills, all of which his Mercer experience helped him develop.

"In the real world, you have to interact with people beyond your engineering team," Prolizo said. "In my job,

I work with different aspects of the company and have to deal with different people. I interact with the sales department and the support department. I also have to give presentations to the executive board of Envisionware. I can do all of that because of the education I received at Mercer University's School of Engineering."

JAMES PROLIZO, ENVISIONWARE, INC. B.S., Engineering, M.S., Engineering - Computer '05
