

EnvisionWare offers the first point of sale transaction system designed specifically for libraries. With EnvisionWare's eCommerce Staff Register, you can process standard point of sale transactions such as inventory item sales, transit passes, book bags, taxable and non-taxable item sales, and returns as well as real-time fine payments.

This point of sale solution enables staff to query fine amounts and item records on the terminal and accept payments. The system integrates with ILS and database-driven deposit accounts and will automatically post and clear fines in the ILS patron record. Payment methods include cash, check, VISA, MasterCard, AMEX, Discover, gift certificates, AAM Deposit Account or ILS Deposit Account.\*

EnvisionWare's Staff Register is unique in its ability to post deposit funds using EnvisionWare's Authentication and Accounting Module (AAM)™. AAM enables your library to host user deposit accounts in a MySQL or Integrated Library System database. This enterprise solution also enables you to offer and manage printing accounts and track staff printing, scanning and copy use through our suite of computer and print management products.

Staff Register also provides the option to:

- Provide auditing and control at the individual staff till, giving staff flexibility to move drawers as necessary and reconcile per till to manage cash at an individual level.
- Integrate transactions with the library's financial system.

### Enterprise-wide Protection and PCI Assurance

Cardholder data is never stored or exposed on the library's systems, giving you peace of mind protection. EnvisionWare customers are automatically protected for a breach across the entire eCommerce enterprise, including terminals, web and point of sale, even if you're not PCI compliant at the time of the incident.\*\*

\* Varies by ILS platform

\*\* This protection is subject to local law

## eCommerce Services Staff Solutions

### Configurations

Manage and report at a single terminal, multiple terminals in a branch, or at an enterprise level.

### Reporting

Report on items sold and on transactions per staff ID, balance the drawer and close out the terminal on the attached receipt printer at each terminal. You can also automatically upload data to an optional Enterprise Manager and run system-wide reports.

### Options

EnvisionWare understands that the needs of every institution vary, so we provide software only, software with point of sale accessories and card terminals, and complete turnkey packages to suit the requirements of each customer and budget. Most libraries install the software on existing circulation stations.
